

# CoopData – Cooperative System Database

A secure, multilingual, and offline-capable platform for cooperative data in

Eswatini

## About CoopData

CoopData is a secure, multilingual, and offline-capable digital platform designed to centralize cooperative data in Eswatini — enabling government, apex bodies, and SACCOs to collect, analyze, and report accurate information for better decision-making, transparency, and strategic development.

## Core Features

- Centralized database for financial and non-financial cooperative data
- Multi-level, role-based access for all stakeholders
- Mobile-first, multilingual interface (SiSwati, English, Portuguese)
- Offline functionality with data synchronization
- Real-time dashboards, KPIs, and performance benchmarking
- API integration with SACCO software and government systems
- Advanced data validation, security, and automated backups

## Why Use This Tool?

CoopData empowers the cooperative sector with accurate, timely, and inclusive information — strengthening transparency, governance, and the capacity to plan and evaluate development initiatives.

## Key Results You Can Expect

- Reliable cooperative statistics for informed policy and planning
- Enhanced sector transparency and accountability
- Greater inclusion through gender, youth, and marginalized group tracking
- Stronger integration between cooperative, government, and financial systems
